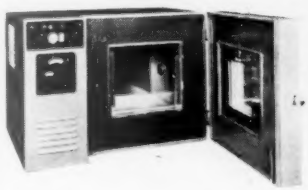
Lec

bench top and free standing environmental cabinet



Model BM 15 incorporates a stainless steel chamber, with a heavy gauge steel outer shell and door. The working space is nearly 1.5 cu. ft. The test range of minus 75°C to plus 100°C is controlled by a temperature indicator controller. The door hinged on the right hand side, with 180° opening, allows unrestricted access. Rear and side panels can easily be removed for servicing. Controlled temperature conditions are becoming vital to research undertakings. Lec have produced this new Low Temperature Cabinet at a price below £300 which will prove ideal for training laboratories, universities, techical and medical establishments. Temperature can be pulled down to –100°C and held.

Dimensions. CL.10B 22″ width 22″ depth 37″ height.

Transducers for instrumentation, F E Duffield, September 1966 (*22*) pp 15-21
Transformation of measured non-stationary vibrations into test data, K Spang, September 1967 (*28*) pp 13-16
Twivey D, *Breather tubes – do they really work?* March 1965 (*13*) pp 25-27; *A high performance humidity cabinet*, January 1968 (*30*) pp 12-14
Economics of humidity control in test cabinets, May 1966 (*20*) pp 18 & 19
UKAEA vibration testing equipment, June 1962 (*2*) p 16
Use of the space chamber in satellite design, B Stockwell, November 1965 (*17*) pp 16-23
van Heuven E W, *The mechanics of rattle*, May 1966 (*20*) pp 20-24
Venning, B H, *Response of dynamic systems to shock excitation*, September 1962 (*3*) pp 11-14
Vibration in modern technology, S L Entres, June 1962 (*2*) pp 12-16
Vibration recording and analysis using FM magnetic tape, S D Hall, June 1963 (*6*) pp 13-16
Warren A G, *Some opinions on random vibration*, March 1963 (*5*) pp 26-28
Watson J R, *Random vibration testing*, March 1966 (*19*) pp 31-33
What do we need to simulate to achieve astronaut selection and training? H F Huddleston, September 1965 (*16*) pp 18-23
Wheeler E E, *Instrumentation for a drop test facility*, July 1967 (*27*) pp 17-20
Wilkinson D, *Our role: the environmental engineer in industry*, March 1962 (*1*) pp 9-10
Wright D J, *Environmental engineering in packaging technology*, March 1962 (*1*) pp 19-21
Yarnold J A L, *High velocity shock machines*, November 1965 (*17*) pp 11-14; *Survey of piezo electric accelerometers*, July 1967 (*27*) pp 22-25;
The change from sine wave to random motion vibration testing, March 1968 (*31*) pp 15-16
Zamparo O J, *Effects of vibration bolted joints*, May 1965 (*14*) pp 19-21
